JAVA

1. Length ways:
   Array → arr.length (no brackets)
   String → str.length() (method)
   Collections (ArrayList, etc.) → list.size()
2. ta.getPakageType().equalsIgnoreCase(packageType)
3. main func input class params

```
// Read 4 agencies (each has 5 fields)
TravelAgencies[] agencies = new TravelAgencies[4];
for (int i = 0; i < 4; i++) {
    int regNo           = Integer.parseInt(sc.nextLine().trim());
    String agencyName   = sc.nextLine().trim();
    String packageType  = sc.nextLine().trim();
    int price           = Integer.parseInt(sc.nextLine().trim());
    boolean flight      = Boolean.parseBoolean(sc.nextLine().trim());
    agencies[i] = new TravelAgencies(regNo, agencyName, packageType, price,
}

// Read search parameters
int searchRegNo         = Integer.parseInt(sc.nextLine().trim());
String searchPkgType    = sc.nextLine().trim();
```

4. class funcs sequence diff??
5.
